MOHAMMED SABITH

STRUCTURAL ENGINEER

Doha – Qatar | +97450371817 | sabithismail6679@gmail.com | https://sabith-eng.vercel.app/

Structural Design Engineer specializing in high-rise and industrial steel structures, with strong expertise in analysis-driven design. Experienced in forensic engineering, structural retrofitting, and verification through FEA and manual hand calculations. Proven ability to deliver safe, code-compliant designs across design, BIM, and construction stages, with a clear focus on technical excellence and chartership development through IStructE.

EXPERIENCE

SKETCH ENGINEERING CONSULTANTS, DOHA-QATAR **FEB 2025 - PRESENT**

-Structural Design Engineer

Key responsibilities:

- **Structural Design:** Delivered comprehensive structural design packages for over 30 residential and 5 commercial developments. Managed tight deadlines while ensuring compliance with architectural requirements and municipal regulations.
- **High-Rise Design:** Designed key structural elements for major projects, including a 2B+G+12 commercial building. Modelled shear walls and flat slab systems to optimize concrete usage through efficient system selection and load path optimization.
- **Steel Structural Design:** Executed design packages for industrial steel projects, including warehouse and pipe support structures. Performed global analysis in STAAD.Pro and connection design in IDEA StatiCa.
- **Design-Led BIM Management:** Directed BIM model development by managing BIM modellers and CAD technicians, ensuring architectural and MEP systems complied with structural intent, constructability, and code requirements.
- **Forensic Engineering & Remediation:** Conducted rigorous structural audits of existing buildings. Developed structural remediation methods like concrete jacketing, CFRP to restore load-bearing capacity for aging or damaged structures.
- **Site Technical Support:** Provided calculation-backed design clarifications to resolve site execution issues.
- **Verification:** Routinely performed manual hand calculations to verify software results for complex structural elements, ensuring absolute safety before approving shop drawings.
- **Technical Documentation:** Authored elaborate technical reports and structural assessment studies, documenting site conditions, rectification methods, and code compliance for the client.

KEY PROJECTS

- **Commercial Tower (2B+G+7):**
  Modelled lateral load resisting system and optimized the raft foundation design to accommodate high soil bearing pressures.
- **Industrial Warehouse:**
  Designed long-span steel trusses and moment-resisting frames, detailing complex connections using IDEA StatiCa. Authored detailed technical report for the client.
- **Old Residential building (G+11) remediation Project:**
  Designed retrofitting system for failing slabs and columns using CFRP, concrete jacketing and steel beams to bypass defective concrete sections.
- **Residential Portfolio:** Delivered full structural design packages for over 30 luxury villas. Engineered efficient framing layouts and foundation systems to accommodate diverse soil conditions and unique architectural requirements.

EDUCATION

Bachelor of Technology in Civil Engineering July 2020 – March 2024
APJ Abdul Kalam Technological University

- 4 Year Full Time bachelor's degree completed with 6.8 CGPA

M.E.S Indian School, Doha-Qatar March 2019

- Central Board of Secondary Education

CERTIFICATIONS & TRAININGS

Professional Steel Structural Design **Oct-2025**
Arabian Infotech Training Institute | Bentley authorized partner

- Comprehensive training on STAAD.Pro, PROKON, and IDEA StatiCa, covering full design cycle of industrial steel structures (Warehouses, Mezzanine Floors, and Multi-story Steel Frames)
- Performed advanced 3D frame analysis, wind load calculation (manual & software), and seismic parameter selection per ASCE 7
- Executed complex connection designs (Base plates, Moment/Shear connections, and splices) using IDEA StatiCa, ensuring compliance with AISC and Eurocodes.
- Designed isolated and combined footings for steel structures using PROKON, verifying base reactions and deflection limits.

Civil & Structural Design Training
Kerala Startup Mission

- Mastered complete load transfer mechanism. Gained deep intuition into structural behavior (tension/compression zones, deflection patterns)
- Performed end-to-end design of multi-story RC buildings. Covered modeling, seismic load application, and design of shear walls, flat slabs, raft foundations.
- Trained in verifying software output using manual hand calculations, ensuring results match engineering logic.
- Applied standard code of practice for detailing reinforcement in beams, columns, and ductile shear wall

TECHNICAL SKILLS

- **Core Software:** ETABS, STAAD.Pro, IDEA StatiCa, CSI SAFE, Prokon, SAP2000, Robot Structural Analysis
- **BIM & Drafting:** Autodesk Revit structure, AutoCAD.
- **Competencies:** High-Rise Design, Forensic Engineering, Hand calculations, Structural Remediation, Seismic & Wind Analysis, Foundation Design
- **Codes of Practice:** ACI 318, ASCE 7, AISC, Eurocodes, Qatar Construction Specifications (QCS)

KEY COMPETENCIES & LANGUAGES

- **Technical Leadership:** Provided structural design guidance to clients and architects, advising on system selection, constructability, and code compliance.
- **Site Engineering & Design Control:** Issued calculation-backed design clarifications to ensure site execution complied with structural intent.
- **Technical Reporting:** Skilled in writing clear, evidence-based reports for structural audits and municipal submissions.
- **LANGUAGES:** ENGLISH (Professional), Malayalam (Native), Hindi (Fluent), Arabic
